Staked

/

Staked operates highly reliable and secure staking infrastructure for **30+ PoS protocols** on behalf of the leading crypto asset investors in the industry.

Highly Reliable and Secure

We use Kubernetes to distribute across multiple cloud providers, and have never been slashed, hacked or experienced extended downtime in 2+ years of operation.

Non-Custodial

You are always in complete control of your private keys and funds throughout the staking process.

Flexible Go-To-Market

We operate branded public pools, quantized nodes, co-branded and completely white-labeled nodes.

Broadest Asset Coverage

Live on 20+ PoS mainnets including Polkadot, Keep, Tezos, Cosmos, Celo and Livepeer. Operating on 15+ testnets launching in 2020 including Skale, Cardano, Near, NuCypher and Oasis.

Block-Level Reporting

Designed for fund admins and accountants, the reporting is exportable, and includes all staking and delegation transactions.

Flow (FLOW)

Flow is a blockchain created by Dapper Labs that aims to make it easy for developers to build decentralized applications and businesses. Flow uses a multi-role architecture design to scale the network instead of sharding. Three areas of focus for FLOW are as follows:

1) Diverse use-cases
2) Broad distribution
3) Low monetary inflation

Key Metrics

Mainnet Launch	12/10/2020
Ciculating Supply	~8,600,000 (as of 12/08/20)
Yield	3.75%
Lock-Up Period:	None
Slashing:	Yes

Join the **Industry Leaders**

Token Usage

FLOW is the native currency for apps, games, and smart contracts built on top of the Flow blockchain, and thus is the currency guaranteed to be available for developers and users to transact with on the network. FLOW token holders will be able to use their FLOW in an evolving number of ways:

1)Payment for computation and validation services (i.e., transaction fees)

2)Medium of exchange

3)Deposit for data storage

4)Collateral for secondary tokens

5)Participation in governance

Rewards

Flow distributes a fixed portion of the total FLOW token supply each year as rewards to validator node operators through a combination of new issuance (inflation) and transaction fees (when combined with inflation, the "total reward"). The total reward will be chosen carefully to be as small as possible while preserving the security of the network (currently contemplated to be set at 3.75% of the total token supply per annum).

Risks

Severe infractions, which undermine the safety of the network, can lead to some or all of the staked tokens being slashed. Flow considers only severe threats to safety and liveness to be slashable conditions. There is no penalty for downtime.

There is no lock-up period.

Instructions

*Before we begin, first you need to **create a Flow wallet**. Your two options are:*

A)Blocto (mobile wallet)

Go to your mobile device's app store and download Blocto. Use your preferred email, and a code will be sent to your email for login purposes. Once the wallet is generated you are good to move onto the next step.

B)Ledger

Connect your Ledger device to your computer and open up the Ledger Live app. You need to install the Flow app in the "Manager section". Once the application is installed onto your Ledger device you can move onto the next step.

Once you have a FLOW wallet and funds sent to it, head over to:
https://port.onflow.org/stake-delegate

1) Select the wallet option you wish to connect and follow the prompts

2) On the left hand navigation click on "Stake & Delegate"

3) Choose the "Delegate" option on the right hand side and click "Start Delegating"

4) Input Staked's Node ID. You can use either one:

- 129aab6407f6f66774ce77a03b8abd1ba67317eab1c70c5c6cdd7a433a7d64e8

- Fcb55c2d1fb2737b159704b5a30b194b8a8ddfb4691d55692af597ac6e236201

5) Enter the amount you would like to stake and click "Continue"

6) Review all the information and submit!
